TC Art Unit: 3635

Confirmation No.: 9662

AMENDMENT TO THE CLAIMS

B3

1. (Currently Amended) Rail section for stretched fabric false partitions, said section comprising at least one groove defined by two lateral walls and a base wall, said groove being designed to contain at least one edge of the stretched fabric after it has been mounted in the section, ~~characterised in that said rail~~ section being of a single piece, said rail section comprises comprising a joint, characterized in that said joint keeps for ~~keeping the edge of the stretched fabric pinched in said groove~~ between the joint and an internal face of one of said lateral walls, said joint being made of a different material having a property of flexibility differing from that of the material constituting the walls of said groove.

2. (Currently Amended) Rail section according to claim 1, characterised in that the cross-section of said groove is in general shaped like a V or U, the extreme portions of the lateral walls of the groove opposite the base wall of the groove defining an opening at least partially sealed off by the joint ~~for~~ retaining the edge of the stretched fabric.

Application No. 10/070,776

Filed: April 8, 2002

TC Art Unit: 3635

Confirmation No.: 9662

3. (Previously Presented) Rail section according to claim 2, characterised in that the joint comprises a single lip protruding from one of the lateral walls of said groove, known as a joint support wall, said lip comprising an internal face opposite the base wall of the groove and an opposing external face.

cont  
B3  
4. (Previously Presented) Rail section according to claim 3, characterised in that the lip joint is an approximately flat joint, the internal face of the lip being approximately parallel to its external face.

5. (Currently Amended) Rail section according to claim 4, characterised in that the single lip of the joint extends ~~approximately perpendicularly perpendicular~~ to its support wall.

6. (Currently Amended) Rail section according to claim 4, characterised in that the lip has a free edge of the lip that is placed inside the groove.

7. (Currently Amended) Rail section according to claim 4, characterised in that the lip has a free edge of the lip that is

Application No. 10/070,776

Filed: April 8, 2002

TC Art Unit: 3635

Confirmation No.: 9662

~~approximately~~ in support against the lateral wall of the groove placed opposite the joint support wall.

8. (Currently Amended) Rail section according to claim 3, characterised in that the joint has a sole lip of the joint that extends along an angle of less than 65° with respect to its support wall.

9. (Currently Amended) Rail section according to claim 8, characterised in that the lip has a free edge of the lip that is placed inside the groove.

10. (Currently Amended) Rail section according to claim 9, characterised in that the free edge of the lip is ~~approximately in~~ support against the lateral wall of the groove placed opposite the joint support wall.

11. (Currently Amended) Rail section according to claim 3, characterised in that the support wall of the single lip projects from the has an extreme portion, of its support wall the single lip of the joint projecting from said extreme portion.

Application No. 10/070,776

Filed: April 8, 2002

TC Art Unit: 3635

Confirmation No.: 9662

12. (Currently Amended) Rail section according to claim 1, characterised in that the lip of the joint comprises an internal face orientated towards the base wall of the groove and an external opposing face, the internal face and the external face of the joint not being parallel to each ~~another~~ other.

cont.  
13. (Currently Amended) Rail section according to claim 12, characterised in that the internal face of the single lip of the joint extends ~~approximately perpendicular~~ to its support wall.

14. (Currently Amended) Rail section according to claim 12, characterised in that the lip has a free edge of the lip that is placed inside the groove.

15. (Currently Amended) Rail section according to claim 12, characterised in that the lip has a free edge of the lip that is ~~approximately~~ in support against the lateral wall of the groove placed opposite the support wall of the joint.

16. (Previously Presented) Rail section according to claim 12, characterised in that the internal face of the single lip of the

21. (Currently Amended) Rail section according to claim 1, characterised in that the joint comprises two lips, projecting from one of the lateral walls of said groove, said joint support wall, namely a first lip known as a support lip, and a second lip known as a masking lip, the internal face of the first lip orientated towards the base wall of the groove being slanted with respect to the joint support wall, the external face of the second lip opposite the base wall of the groove being approximately perpendicular to the joint support wall.

22. (Currently Amended) Rail section according to claim 21, characterised in that the first lip has a free edge of the first lip that is in support against the lateral wall of the groove placed opposite the joint support wall.

23. (Previously Presented) Rail section according to claim 21, characterised in that the internal face of the first lip is slanted by an angle of less than 65° with respect to the joint support wall.

24. (Currently Amended) Rail section according to claim 21, characterised in that the support wall of the joint has an the two

~~lips project from the extreme portion, of the joint support wall~~  
the two lips projecting from said extreme portion.

25. (Previously Presented) Rail section according to claim 1, characterised in that the joint comprises two lips, each lip projecting from one of the lateral walls of said groove and comprising an internal face opposite the base wall of the groove and an external opposing face.

26. (Previously Presented) Rail section according to claim 25, characterised in that the two lips are approximately symmetrical with respect to a plane perpendicular to the base wall of the groove and placed halfway from the two lateral walls of the groove.

27. (Previously Presented) Rail section according to claim 25, characterised in that the internal face of at least one of the two lips is slanted by an angle of less than 65° with respect to the lateral support wall of said lip.

28. (Currently Amended) Rail section according to claim 25, characterised in that the external face of at least one of the two

lips extends ~~approximately~~ perpendicular to the support wall of  
said lip.

29. (Previously Presented) Rail section according to claim 2,  
characterised in that the lateral walls of the groove are made of  
an approximately rigid material selected from the group comprising  
metal alloys and rigid polymers, the joint being made of a  
substantially flexible material, such as a flexible polymer.

30. (Currently Amended) Rail section according to claim 1,  
characterised in that ~~it~~ the rail section is obtained by co-  
extrusion or duplicate moulding of different materials, namely a  
first material constituting the substantially rigid walls of the  
groove, and a second material constituting the joint.

31. (Currently Amended) Rail section according to claim 30,  
characterised in that the walls of the groove are made of a rigid  
PVC-based material, ~~possibly recycled~~, the joint being made of a  
flexible PVC.

32. (Currently Amended) Rail section according to claim 1,  
characterised in that ~~it~~ the rail section comprises an external

wing from which protrudes perpendicularly is a core bearing projecting an internal wing, said internal wing being approximately parallel to the lower portion of the external wing, the internal wing and the lower section of the external wing forming the lateral walls of said groove, the core of the rail section constituting the base wall of said groove, the upper portion of the external wing comprising a C-shaped groove able to receive means for assembling the two portions of the ~~butt~~-rail sections.

33. (Previously Presented) False wall comprising a stretched fabric fixed along its edges to a support fixed onto the walls of a room; said support comprising a rail formed of portions of sections as shown in claim 1, characterised in that the edge of said fabric is provided with an excess thickness taking support against the internal face of the joint.

34. (Currently Amended) False wall as shown in claim 33 and used as a false ceiling, the groove for the rail section being oriented downwards, the lateral walls of the groove being approximately vertical, a first lateral wall of the groove being mounted close to a wall and the second lateral wall of the groove being situated

the support wall has an extreme portion, the single lip  
~~projects projecting from the said extreme portion of its support~~  
wall.

42. (Currently Amended) Rail section according to claim 3,  
characterised in that:

cont.  
B3  
the lip of the joint comprises an internal face orientated  
towards the base wall of the groove and an external opposing face,  
the internal face and the external face of the joint not being  
parallel to each another;

the internal face of the single lip of the joint extends  
~~approximately perpendicular~~ to its support wall;

the lip has a free edge of the lip that is placed inside the  
groove;

the free edge of the lip is ~~approximately~~ in support against  
the lateral wall of the groove placed opposite the support wall of  
the joint.

43. (Currently Amended) Rail section according to claim 13,  
characterised in that:

the internal face of the single lip of the joint extends  
along an angle less than 65° with respect to its support wall;
